

Engineering

Curious, excited about the latest technology, always ready to create and give magic to the products and tools of the future. This team's core responsibility is to ensure best-in-class product development, to ensure that our products are engineered best for security, reliability and scalability.

This team is looking for ideas from every area of computer science including artificial intelligence, natural language processing, Big data, Analytics, distributed computing and user interface design to a name a few.

Versatile & passionate team ever ready to take on some of technology's greatest challenges and handle any project as our business grows and evolves to make an impact on millions of users.

Key responsibilities:

- Write well designed and optimized code
- Contribute in all phases of development lifecycle - troubleshoot, test and maintain the core product and database to ensure strong optimization and functionality.
- Develop and deploy new features to facilitate related procedures and tools if necessary

Qualifications:

Minimum qualifications:

- B.E / B.Tech / MCA/ BSc computer science
- Expert in Python, with knowledge of Python web framework such as Django
- Familiarity with ORM (Object Relational Mapper) libraries, threading, and multi-process architecture
- Hands on experience on MySQL and Mongo
- Good understanding of RESTful services and API
- Understanding of front-end technologies, such as JavaScript, HTML5, and CSS3

Preferred qualifications:

- Understanding of natural language processing
- Knowledge of caching, search, messaging queues (Elastic Search, Rabbit MQ, Redis, etc.)
- Ability to effectively work in a team
- Good analytical skills and a problem solver
- Proven ability to multitask and manage multiple tasks
